Meeting Minutes

We had 2 meetings during the 8th week. Both meetings were conducted via Facebook chat. The first meeting was a status progress update where we collaborated in trying to debug the API code. In the second meeting we discussed and prepared for a 3 minute presentation.

CSS and UI changes

We have updated our CSS and UI to make the website look more clean and visually better to look at. The first screenshot will be the Share Market Page. We still can't display the data but we are able to pull data from the API. We added the Navigation menu to the side. The second screenshot shows the Profile Page.

Menu

User Login dropdown menu

We have added a drop down menu when users login on the right corner of the website. They are able to log out, go to their profile page, go to the help page and general account settings.

Github Repository

We will be using Github as our repository to share our documentation and files for the project publicly to you, allowing you to see our progress.

Trello Board

We will be using Trello as a way to keep track of the current progress of the project.

Additional Notes

During this week we mainly focused on debugging the API code trying to get the data to be displayed on the website. We also worked on the CSS and UI of the website to make it more visually appealing. We are aware that we have not been doing the commits on GitHub properly. However, starting from next week we will change that.
